Hydraulic Hand Pumps

The hand-pumps of the GL-series are manufactured on most modern CNC-machines and by using accurately selected raw materials. The production in large series and the highest quality controls confirm them on the highest world level for products of this type of construction. Their application is in various fields: as emergency or auxiliary pump in mobile or industrial hydraulics; as main pump in the high pressure technology for: material testing, hoisting, levelling, block-technology, cutting machines, presses, etc. The surface treatment are: powder painting (std RAL 5015) with furnace drying at 200° for bodies and yellow zinc-coated for other external part.

Double acting function: symbol \longleftrightarrow
The lever must be actuated forwards+backwards in order to obtain the shown delivery (cm³)

Single acting function: symbol \longrightarrow
The shown delivery (cm³) is obtained by actuating the pedal/lever in one direction only
